## DIGITISING POWER METER

POSITIVE PROBLEM SOLVING **+ =**

**This range consists of 3 digitising power meters that are used to measure both AC & DC Loads. Retractable legs provide a good viewing of live values.**

Each unit is built with front panel control and display and includes an IEEE 488.2 interface as standard. A total of 6 automatic switching ranges provide a tight resolution and high accuracy of the voltage and current being measured. Digital integration is used to calculate the power factor and actual power being taken by the unit under test. Applications include power supply, computer, lamp and ballast and monitor testing.

- + Digital Integration for W & PF**
- + Six Voltage & Current Ranges**
- + Front Panel Calibration**
- + V/I/W/PF Display**
- + High Accuracy**

## FURTHER DETAILS

The GT-4012A is particularly suitable for adapter no load measurement as its lowest current range is 0-125mA. The GPIB interface makes this unit ideal for integration into automated test systems. The carrying handle and low weight of 4.5kgs also make this unit suitable for mobile users.
