

ELP-3360F

HIGH VOLTAGE DC LOAD

POSITIVE PROBLEM SOLVING 

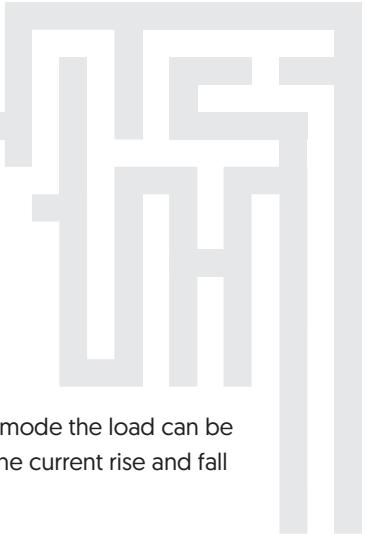

This series of 500Vdc electronic loads provides a wide range of current and power ranges.
A wide range of computer interfaces are available upon request.

The high voltage makes these electronic loads ideal for Power Factor Correction testing along with a host of other production and laboratory applications. The front panel has an isolated BNC output so that the load current can be monitored on an external scope. The high accuracy 5 digit displays features 16 bit resolution. Dual setting ranges provide excellent measurement accuracy at low current.

- + CC, CR, CV, CP, Dynamic & Short Mode**
- + Full Selection of Computer Interfaces**
- + 150 Sets Store / Recall Memory**
- + LabVIEW Drivers**

ELP-3360F

HIGH VOLTAGE DC LOAD

FURTHER DETAILS

For production testing GO/NG limits can be set. When used in constant current or constant power mode the load can be set to operate dynamically. This enables the load current to be switched between two levels and the current rise and fall times adjusted.

The time that the load is at the higher sink level and the time it is at the lower setting can also be adjusted.

A short circuit test function is provided as standard. The short voltage and current can be read via the front panel or interface. If short circuit functions are not desired then the unit can be built without this feature.

The load can be set to turn on or off when a preset voltage is present at the load's terminals.
